CSE225L – Data Structures and Algorithms Lab Lab 07 Queue (array based)

In today's lab we will design and implement the Queue ADT using array.

```
quetype.h
                                       template<class ItemType>
                                      QueType<ItemType>::~QueType()
#ifndef QUETYPE H INCLUDED
                                          delete [] items;
#define OUETYPE H INCLUDED
                                      template<class ItemType>
class FullQueue
                                      void QueType<ItemType>::MakeEmpty()
{};
class EmptyQueue
                                           front = maxQue - 1;
{};
                                          rear = maxQue - 1;
template<class ItemType>
class QueType
                                      template < class ItemType >
                                      bool QueType<ItemType>::IsEmpty()
   public:
        QueType();
                                          return (rear == front);
        QueType(int max);
        ~QueType();
                                      template < class ItemType >
        void MakeEmpty();
                                      bool QueType<ItemType>::IsFull()
        bool IsEmpty();
        bool IsFull();
                                           return ((rear+1)%maxQue == front);
        void Enqueue(ItemType);
        void Dequeue(ItemType&);
                                      template<class ItemType>
    private:
                                      void QueType<ItemType>::Enqueue(ItemType newItem)
        int front;
        int rear;
                                           if (IsFull())
        ItemType* items;
                                               throw FullQueue();
        int maxQue;
                                          else
};
                                               rear = (rear +1) % maxQue;
#endif // QUETYPE_H_INCLUDED
                                               items[rear] = newItem;
quetype.cpp
                                      template<class ItemType>
#include "quetype.h"
                                      void QueType<ItemType>::Dequeue(ItemType& item)
template<class ItemType>
                                           if (IsEmpty())
QueType<ItemType>::QueType(int max)
                                               throw EmptyQueue();
                                           else
   maxQue = max + 1;
                                           {
   front = maxQue - 1;
                                               front = (front + 1) % maxQue;
   rear = maxQue - 1;
                                               item = items[front];
   items = new ItemType[maxQue];
                                      }
template<class ItemType>
QueType<ItemType>::QueType()
   maxQue = 501;
   front = maxQue - 1;
   rear = maxQue - 1;
    items = new ItemType[maxQue];
```

Generate the **Driver file (main.cpp)** and perform the following tasks:

Operation to Be Tested and Description of Action	Input Values	Expected Output
• Create a queue of size 5		
Print if the queue is empty or not		Queue is Empty
Enqueue four items	5 7 4 2	
Print if the queue is empty or not		Queue is not Empty
Print if the queue is full or not		Queue is not full
Enqueue another item	6	
Print the values in the queue		5 7 4 2 6
Print if the queue is full or not		Queue is Full
Enqueue another item	8	Queue Overflow
Dequeue two items		
Print the values in the queue		4 2 6
Dequeue three items		
Print if the queue is empty or not		Queue is Empty
Dequeue an item		Queue Underflow
Add a function ReplaceItem to the QueType class which	h replaces all occurrences of	of oldItem with newItem in the

Add a function ReplaceItem to the QueType class which replaces all occurrences of oldItem with newItem in the
Queue.

Queue Items:

21 9 13 9 29

void ReplaceItem(int oldItem, int newItem);

Sample Input & Output:

Queue Items: ReplaceItem(26, 9)
21 26 13 26 29
